

During the past 19 years, I have Gain skills, and I'm still learning.

My journey in the world of technology began in 2004 when I started my career as a programmer. Over the years, I have honed my skills and expertise, successfully developing over 400 websites using PHP and JavaScript. During this time, I also gained valuable experience working on various systems like CMS, LMS, CRM, and ERP.

In 2012, a significant turning point arrived when I ventured into the realm of digital marketing. I created a specialized system for sending mass emails and messages, which we successfully sold to marketing companies. This marked the beginning of my foray into the dynamic world of digital marketing.

Two years later, in 2014, I embraced the e-commerce sector by creating the first integrated Arabic platform of its kind. Combining my software development and marketing experiences, the platform enjoyed substantial success, generating considerable profits.

Between 2016 and 2018, I faced a series of challenges related to Trademarks rights Ads, leading to several lawsuits and eventual closure of the platform in most Arab countries. Additionally, logistical issues related to shipping goods presented further obstacles.

However, in 2018, I embraced the potential of artificial intelligence and integrated it into my projects. By combining AI with the digital marketing field, I developed innovative programs that significantly reduced the need for actual employees. These AI-powered systems efficiently collected and linked data with CRM and CMS platforms, streamlining operations.

In 2019, I embarked on a personal project focused on manipulating search engine rankings (SEO) using artificial intelligence. This project demonstrated the power of AI in creating unique and compelling content, and you can find more about this experience on my [LinkedIn profile](#).

Throughout my journey, I have had the opportunity to collaborate with major companies as a subcontractor, and this has taken me to various countries, including Italy, Greece, Poland, and Romania, to implement specific contracts.

My passion for technology, combined with an entrepreneurial spirit, has driven me to constantly seek new challenges and innovative solutions in the ever-evolving landscape of the digital world.
